No Gambling on Air Quality for Guests

Located 6,000 feet above sea level, Casino de GENTING is the perfect place to be when it comes to sophisticated gaming and excitement. Since the Casino opened its doors in 1971, it has grown from strength to strength, keeping itself up to date with changing times. Today, Casino de GENTING is one of the finest gaming destinations in Asia with over 200,000 square feet dedicated to the providing you the ultimate gaming experience.

Casino de GENTING is also committed to providing the ultimate healthy indoor environment for its staff and clients.

In early January we had the opportunity to sit down with management in cooperation with Suasana Nyaman Sdn Bhd, a local Malaysian company, and begin the process of ensuring a healthy indoor atmosphere for those visiting the casino and staying in one of the 6,000 available guest rooms. We will be providing consultation on related issues such as smoke management in the casinos as well as fungal growth control on exterior building surfaces. A location in a tropical environment brings with it many challenges but it will be an exciting long term partnership where combined expertise will prevail.

Center For Occupational & Environmental Medicine, P.A.

We conducted an indoor environmental assessment for a lady in Georgia who had been suffering debilitating symptoms that were diagnosed as being mold related.

Timothy Callaghan, M.D. at the center put her through a rigorous regime of therapy that has her back operating at her normal capacity.

I have personally spoken with Dr. Callaghan and am impressed at their innovative approach to the treatment of people suffering from environmentally related problems.

**Chronic Sinusitis Cases
Top 37 Million per Year**
Still the #1 complaint seen
by doctors today.

Mayo Clinic researchers have discovered that an immune system response to fungus is the root cause of most chronic sinusitis infections. Prior to this finding fungus allergy was suspected in less than 10% of cases.

"Our studies indicate that, in fact, fungus is likely the cause of nearly all of these problems".
Stated Dr. Sherris, ***"It is not an allergic reaction, but an immune reaction."***

"This potential breakthrough offers great hope for the millions of people who suffer from this problem." says Dr. Kern. ***"We can now begin to treat the cause of the problem instead of the symptoms."***
